Airport Development

Air1 - AVIATION COMPATIBLE DEVELOPMENT

The City of Castroville and Castroville Airport are looking to develop land west of the runway for businesses that can benefit from easy airport access. We will work with Developers based on our airport master plan.

Air2 - Additional Hangars

The T-hangar units that can be built are the most common type of storage space for aircraft with wingspan up to about 40 feet. The hangars will be versatile and provide room for most general aviation aircraft as well as space for a tool bench and cabinets for equipment, tools, and other necessities.
